Submitted (18-58P-2000) Genoscope - Centre National de Sequencage, 2 rue Gaston Cremieux, CP 5706, 91057 EVRY cedex, FRANCE. (B-mail: sequefégenoscope.nas.fr. Web: 1 rough the sequencing program of thirteen yeast species: Saccharomyces bayanus var. uvarum, Saccharomyces exiguus, Saccharomyces servazzii, Zygosaccharomyces rouxii, accharomyces rouxii, angusta, bebaryomyces hansenii var. hansenii, Pichia sorbitophila, candida tropicalis and Yarrowia lipolytica. Genomic inserts of 3 to 5 kb were prepared and both extremities were sequenced. See keywords for description of this sequence and for the sequence of

Submitted (08-SEP-2000) Genoscope - Centre National de Sequencage, Submitted (08-SEP-2000) Genoscope - Centre National de Sequencage, 2 rue Gaston Cremieux, CP 5706, 91057 EVRY cedex, FRANCE. (B-mail: seqref@genoscope.cns.fr - Web: Tandom genomic sequencing program of thirteen yeast species: Saccharomyces bayanus var. uvarum, Saccharomyces erroazii, Zygosaccharomyces rouxii, Saccharomyces shruyveri, Kluyveromyces remoncelerans, Kluyveromyces lactis var. lactis, Kluyveromyces marxianus var. marxianus, Pichia angusta, Debaryomyces hansenii var. hansenii, Pichia sorbitophila, Candida tropicalis and Yarrowia lipolyfica. Genomic innerts of 3 to 5 kb were prepared and both extremities were sequenced. See keywords for description of this sequence and for the sequence of the other extremity of this insert.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sm Candida tropicalis

(E-mail: seqref@genoscope.cns.fr - Web: This GS: spart of a random genomic sequencing program of thirteen yeast species: Saccharomyces bayanus var. uvarum, Saccharomyces ervazzii, Zygosaccharomyces rouxii, Saccharomyces servazzii, Zygosaccharomyces rouxii, Saccharomyces harmotolearans, Kluyveromyces lactis var. lactis, Kluyveromyces marxianus var. marxianus, Pichia angusta, Debaryomyces hansenii var. hansenii, Pichia sorbitophila, Candida tropicalis and Yarrowia lipolytica. Genomic inserts of 3 to 5 kb were prepared and both extremities were sequenced. See keywords for description of this sequence and for the sequence of the other extremity of this insert.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   2 (bases 1 to 1011)

Tetraodon nigroviridis genome survey sequence T7 end of clone 123MOS of library G from Tetraodon nigroviridis, genomic survey sequence.
end repaired, adaptor ligated and size fractionated using sephadex. The resulting fragments were between 0.8 and 3 kb and were cloned into the vector (.x/y reads in M13mp19, b/g reads in PUC19). The same ligation was transformed in either JM107 or DH5a."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         946 ACAGTTACAGACAGTACCACTGCTGTCACTTTACCATTCAATCCAAGTGTTGATAAA 1005

//clone lib="WGS-sbicolorF (DHSa methyl filtered)"
//ocle="Site_1: Xba I; Site_2: Xba I; The vector was
digested with XbaI and one nucleotide was added by fill in
in the recessive 3' end. The genomic DNA was nebulized,
end repaired, adaptor ligated and size fractionated using
sephadex. The resulting fragments were between 0.8 and 3
kb and were cloned into the vector (:x/y reads in M13mpl9,
b/g reads in pUC19). The same ligation was transformed
into DHSa."

/organism="Sorghum bicolor"
/mol_type="genomic DNA"
/mol_type="genomic DNA"
/db_xref="taxon:4558"
/clone="id52c10"
/lab_host="DH5a"
/clone=lib="WGS-SbicolorF (DH5a methyl filtered)"
/clone="site=1: Xba I; Site 2: Xba I; The vector was digested with XbaI and one nucleotide was added by fill in in the recessive 3' end. The genomic DNA was nebulized, end repaired, adaptor ligated and size fractionated using sephadex. The resulting fragments were between 0.8 and 3 kb and were cloned into the vector (.x/y reads in M13mp19, .b/g reads in pUCl9). The same ligation was transformed into DH5a.
                                                                                                                                                                                                                                                                                                                                                                                                                Sorghum bicolor
